Please note: Long slacks and closed toed shoes must be worn on this tour.

Join us as we tour Senninger Irrigation!

Senninger Irrigation (www.senninger.com), manufacturers of sprinklers, spray nozzles and pressure regulators, is located in Clermont, Florida and was founded in 1963. Their products are used in agriculture, nurseries, land application of effluent solutions, and leaching of copper and gold mining solutions. Recognizing their success is truly helping others succeed, Senninger continues to provide more effective and efficient means of water application. Over the years, they've led the irrigation industry with relevant innovations designed to meet specific needs.

Perhaps the real story isn't their products as much as their foundation. Senninger is truly committed to a group of core values; honesty, trust, loyalty, respect and teamwork; relying on them as their plumb-line for making decisions regarding people and business.

The plant tour will begin with a presentation and overview of the company, followed by small group departmental tours, featuring R&D, Production Engineering, Molding, Assembly and Testing.

Tour is co-sponsored by MACF member R.C. Stevens Construction, who designed and built Senninger's facility using the Stevens' trademarked Right Track™ project delivery process.
